Xenon is a 'noble' or 'inert' gas present in the atmosphere to a small extent. Xenon was discovered in 1898, in London, by William Ramsay and Morris Travers. They discovered it in the residue remaining after liquid air had been fractionally distilled. Spectroscopic analysis showed the previously unseen beautiful blue lines that indicated the presence of a new element – xenon. Travers wrote of their discovery, “krypton yellow appeared very faint, and the green almost absent. Several red lines, three brilliant and equidistant, and several blue lines were seen. Latter! The name comes from the Greek word ‘xenos’ meaning stranger.
