Abstracts

Zener diode is used for regulating voltage in practical circuit applications. This semiconductor device permits the flow of current in a unidirectional way. Provided with sufficient voltage, they allow the flow of current in the opposite direction as well. The excess voltage required for reversing the direction of flow of current is termed as breakdown voltage or Zener voltage. The major role of a Zener Diode is to function as a voltage regulator. It is fairly employed in many electrical and electronic tools and equipments. The Zener Diode varies in a wider range based on its mounting location. Most of them are either mounted onto a surface or found in holed components. The surface mount Zener Diodes are directly mounted on a printed circuit board.

SCOPE OF THE REPORT:

This report focuses on the Zener Diodes in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Currently, sputter coating has a certain potential in USA, Europe and Asia Market. These areas demand are relatively stable, with slightly growth. During these years, Asian sputter coating industry maintains a rapid growth. Asian and Pacific Area dominated the global sputter coating market in terms of volume, accounting for 72.45% of the overall market in 2016.

Sputter Coating demand market has a huge space, there is a large market demand for high-end products to seize market share. And Developing Countries such as China India will growth fast in the few years.

The sputter coating market is being driven by the application of coating in electronics devices and semiconductors. The restraining factor affecting the market includes high

overall cost of sputter coating due to added cost of different batches during in-line production and fluctuations in raw material prices. Improving the visibility of the technology by educating customers and use of sputter coating technique implementation for other application, along with rise in demand for high quality sputter coated components in semiconductor, solar, medical and telecommunication fields are the key growth opportunities for players in the market.

Electronics and semiconductor sector represent the major application for the sputter coating technology. The sputter coating technique is profoundly used for metal deposition on silicon wafer for electronic circuit generation in semiconductor devices. The coating done by sputtering is used to improve data storage capacity of the memory devices such as CDs, DVDs, memory card, hard disk drive and to enhance the image quality of display devices used in consumer electronics such as LCDs, Smart phones, tablets, laptops, and others....

Each of the sputter coating manufacturers has its own mature sales networks. Through retail stores, their authorized distributors or their partners, major sputter coating manufacturers keep keening on expanding their sputter coating sales. To achieve better sales business, sputter coating manufacturers usually invest on their marketing channel infrastructures every year.

The worldwide market for Zener Diodes is expected to grow at a CAGR of roughly 2.9% over the next five years, will reach 960 million US\$ in 2023, from 830 million US\$ in 2017, according to a new GIR (Global Info Research) study.
