Abstracts

Animal stem cell therapy is a usage of animal's stem cell to treat a disease or disorder. The ability of stem cell is to divide and differentiate into a cell with specialized function useful for repairing body tissues damaged by injury or disease. The animal stem cell therapy process involves three steps which include collection of stem cell sample from animals and preparing the sample to concentrate the stem cells. Finally, the therapy includes transferring the stem cells into the injured site for treatment. Animal stem cell therapy increases the expectancy of life in animals with no side effects. It is available for the treatment of arthritis, degenerative joint disorders, tendon, and ligaments injuries in animals. Stem cell therapy is most often used to treat dogs, cats, and horses. But recent developments made it possible to use animal stem cell therapy in tiger, pig, etc. Present animal stem cell therapy is studied in treatments of the inflammatory bowel, kidney, liver, heart and immune-mediated diseases respectively.
