Abstracts

Ecall is an in-vehicle road safety system which automatically calls the emergency services in case of a serious accident, even if the driver and passengers are unconscious. eCalls can also be made manually by car occupants. As soon as the eCall sensors register a severe impact on a vehicle or a call is initiated manually, the system automatically dials the pan European 112 emergency voice call number and calls the relevant Public Safety Answering Point (PSAP). A Minimum Set of Data (MSD) of 140 bytes is transmitted as part of the call.
