## Abstracts

Automotive Surround-View Systems is a vehicle camera system that provides different views like top view, rear view and panorama view to assist the driver when parking, either manually or automatically. It offers the driver the view of the exterior of the vehicle to aid in manoeuvring the vehicle to park and to alert the driver to obstacles in its path that may not be immediately visible. A display on the vehicle's interior control panel shows surround view, which is typically composed of four wide-angle cameras that are mounted in the wing mirrors, at the front and rear of the vehicle.
