Abstracts

BFS (Blow-Fill-Seal) technology is a manufacturing technique used to produce small, (0.1mL) and large volume, (500mL +) liquid-filled containers. Originally developed in Europe in the 1930s, it was introduced in the United States in the 1960s, but over the last 20 years it has become more prevalent within the pharmaceutical industry and is now widely considered to be the superior form of aseptic processing by various medicine regulatory agencies including the U.S. Food and Drug Administration (FDA) in the packaging of pharmaceutical and healthcare products.
