## Abstracts

Household Dehumidifiers is a machine used to remove excess moisture from the air, improving the comfort and health. Dehumidifier removes heat from air, which will also lose its ability to retain moisture, and the colder surface of dehumidifier will pull and collect water from the air.

In an average home in which the temperature is 68 degrees Fahrenheit, the relative humidity should ideally be between 30 and 50 percent. But in many places, it cannot access, when a dehumidifier may be helpful. Today, dehumidifiers are very popular in USA, especially in coastal regions.
