This report studies the Insect Feed market, by type (Meal Worms, Fly Larvae, and Others), application (Pig Nutrition, Poultry Nutrition, Dairy Nutrition, Aquaculture and Others). Insects can be grown on organic waste. Therefore, insects are a potential source for conventional production (mini-livestock) of protein, either for direct human consumption, or indirectly in recomposed foods (with extracted protein from insects); and as a protein source into feedstock mixtures. This report only focuses on the insect products for animal feeding purposes. These insect feed products include fully dried larvae, ready blended meal, insect oil and a few other types of end products.
