Abstracts

Solvent recycling is the process of taking used, dirty solvents and cleaning them until the solvent is returned to its pure form or to any acceptable specification. Used solvents are placed in a solvent recycler and put through a process that fractionates and distills them from the chemicals that made them dirty those introduced to create a reaction with the solvent. Aside from the positive environmental impact from solvent recycling, a key benefit is cost reduction. Companies don't need to buy the same amount of solvent, because it can be recycled, and disposal fees are greatly reduced with less of the dirty solvent discarded. This can be true for any segment of industry that uses solvents, including laboratories, auto body shops, paint shops and paint contractors.
