In the medical industry, a nasal plane is a special tool used for nasal surgery. It is used for sinus surgery or other medical procedures that require cutting or trimming of the nose. Nose planing knives in the medical industry typically consist of a sharp blade and a handle. The shape and size of the blade may vary depending on specific surgical needs. The handle is usually designed to conform to ergonomic shapes, so that doctors can better control and operate the tool. Nose planing knives in the medical industry are mainly used for the following situations: 1 Sinus surgery: Sinus surgery is a kind of surgery used to treat Sinusitis, Nasal polyp and other nasal diseases. During the surgery, the doctor uses a nasal plane to cut and trim sinus tissue to restore normal nasal function. 2. Nasal plastic surgery: In some nasal plastic surgeries, doctors may need to use a nasal plane to adjust the shape and structure of the nose to achieve cosmetic or functional improvements. 3. Repair of nasal trauma: In cases of nasal injury or injury, doctors may need to use a nasal plane to repair the damaged nasal tissue and restore the appearance and function of the nose. The nasal shaver in the medical industry is a professional medical tool that can only be operated and used by specially trained doctors or surgeons. When using a nasal planer for surgery, doctors need to strictly follow operating procedures and safety measures to ensure the safety and success of the surgery.
