According to our (Global Info Research) latest study, the global NoSQL Database market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A NoSQL database provides a mechanism for storage and retrieval of data that is modeled in means other than the tabular relations used in relational databases. Such databases have existed since the late 1960s, but did not obtain the 'NoSQL' moniker until a surge of popularity in the early twenty-first century, triggered by the needs of Web 2.0 companies. NoSQL databases are increasingly used in big data and real-time web applications. NoSQL systems are also sometimes called 'Not only SQL' to emphasize that they may support SQL-like query languages, or sit alongside SQL database in a polyglot persistence architecture.
