An NPC generator is a tool or system that uses artificial intelligence technology to automatically create or dynamically generate non-player characters (NPCs) in games. This allows NPCs to possess automatically generated appearances, behaviors, dialogues, personalities, or task logic, without relying entirely on manual coding and design.

The core features of an NPC generator include dynamically generated characters, enhanced interactivity, personalization and persistent memory, and AI-driven behavioral logic.

The components of an NPC generator typically include a character generation module, a dialogue engine, a behavior system, a memory system, and a personality model.
