Nuclear air filtration market mainly entails the efficient use of High Efficiency Particulate Air (HEPA), pre-filters and carbon Filters. High efficiency particulate air filters deliver high efficiency and demonstrate elevated potential in removing droplets, contaminants and sub-micron sizes particles utilizing advanced diffusion techniques and efficient particle attraction. It is capable of eliminating up to 99.97% of pollutants.

Scope of the Report:

This report focuses on the Nuclear Air Filtration in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The increasing safety concerns and strict environmental laws are mandating the nuclear power generation units to deploy robust air filtration systems. After a number of nuclear accidents in the past, a greater degree of accountability and responsibility is demanded from nuclear establishments. This along with the pressing need of cutting down radioactive emissions and nuclear air pollution is fuelling the market. Moreover, it is estimated that the life extension of nuclear power generation plants is higher than other types of power plants. To keep the reactors running unflinching, the maintenance of each component becomes crucial. Therefore, components such as air filters find strong demand in these power plants in new as well as retrofit applications.

However, the various incidents of nuclear disasters have resulted in negative publicity of nuclear power generation among public, which in turn is retarding the growth of the nuclear energy market and its overlying industries. Moreover, the rigorous process of

obtaining green certification, which is required to launch these products is hampering the growth of the global nuclear air filters market. Nevertheless, rapid technological advancements are likely to create ample growth opportunities for the market.

North America, with United States in particular, is the most crucial market for nuclear air filtration systems and is expected to witness substantial growth in the near future. Countries having a large number of nuclear power generating facilities and research establishments are expected to boost the global nuclear air filtration industry growth over the forecast period. UK, France, Japan, Sweden, Russia, Ukraine, Germany, India, South Korea and China holds greater potential for the filters for the years to come.

The worldwide market for Nuclear Air Filtration is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
