Control rods are used in nuclear reactors to control the fission rate of uranium and plutonium. They are composed of chemical elements such as boron, silver, indium and cadmium that are capable of absorbing many neutrons without themselves fissioning.

Scope of the Report:

This report focuses on the Nuclear Control Rods in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The need for reduction in carbon emissions will induce the power generation market to adopt cleaner electricity generation technologies like nuclear power generation with low carbon footprint.

Since, steel plate composite construction offers modular construction and reduces the construction time, it is gaining popularity in the nuclear reactor construction market. Additionally, its robust design also increase the safety and resilience of nuclear power plants and also assists in creating higher resistance against any blast, seismic, and impact loads.

The worldwide market for Nuclear Control Rods is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
