According to our (Global Info Research) latest study, the global Nuclear Facility Inspection Services market size was valued at US\$ 3088 million in 2025 and is forecast to a readjusted size of US\$ 4087 million by 2032 with a CAGR of 4.1% during review period.

Nuclear facility inspection services refer to systematic technical reviews and inspections conducted by professional organizations in accordance with national regulations and international standards to ensure the structural safety and system reliability of nuclear facilities throughout their entire life cycle. It spans all stages, from site selection, construction, commissioning, operation, to decommissioning. Its core function is to verify the integrity of critical components and identify and manage potential defects and aging damage through a series of non-destructive tests, performance tests, and safety assessments. This service is the cornerstone of nuclear safety regulation, and its fundamental goal is to provide independent and objective evidence to confirm that nuclear facilities are always in a safe and controllable state and meet operating license requirements.

Its development prospects are closely linked to two major trends: the global nuclear power industry recovery and the aging of units. It is evolving from a support service to a technology-driven industry. On the one hand, newly built units are creating a continuous incremental market for pre-service inspections and construction supervision. On the other hand, the vast majority of operating units globally face life extension and deep aging management, creating a rigid demand for more complex and frequent in-service inspections and life assessments. The core technological driving force lies in intelligence and automation. For example, the application of robots equipped with

advanced sensors, digital twins, and AI diagnostic technologies is significantly improving the accuracy and efficiency of inspections and reducing the risk of radiation exposure to personnel, thus driving the industry to upgrade to a high-value-added technology service model.
