Abstracts

According to our (Global Info Research) latest study, the global Nuclear Fusion Cables market size was valued at US\$ 322 million in 2025 and is forecast to a readjusted size of US\$ 830 million by 2032 with a CAGR of 14.8% during review period.

Nuclear fusion cables are high-performance special cables and conductor systems specifically designed for use in tokamaks, stellarators, and other magnetic confinement fusion devices. They enable ultra-high current magnet excitation, cryogenic superconducting connections, signal transmission within vacuum chambers, diagnostic measurements, and equipment power supply and control. Unlike ordinary power cables, nuclear fusion cables must withstand extreme environments including strong magnetic fields, high currents, cryogenic temperatures, vacuum, neutron/gamma irradiation, high-temperature cycling, and complex electromagnetic disturbances. The core of a nuclear fusion cable is the superconducting cable, which is crucial for achieving economical and controlled nuclear fusion. Superconducting cables utilize the zero-resistance characteristic of superconducting materials at cryogenic temperatures, enabling the transmission of enormous currents with extremely low loss.
