Abstracts

According to our (Global Info Research) latest study, the global Nuclear-grade Epoxy Coating market size was valued at US\$ 369 million in 2025 and is forecast to a readjusted size of US\$ 552 million by 2032 with a CAGR of 6.2% during review period.

Nuclear-grade Epoxy Coating is a specially formulated epoxy-based paint system qualified for use in safety-related areas of nuclear power plants. As a category of nuclear-grade protective coating, it must undergo rigorous qualification testing to demonstrate long-term resistance to high-dose radiation, chemical exposure (e.g., boric acid), and harsh environmental conditions while maintaining integrity post-DBA. Its key characteristics include a smooth, non-porous surface for easy decontamination, providing a protective barrier on substrates like concrete and steel within containment to ensure safety and longevity.

In 2025, the global production of nuclear-grade epoxy coating reached 3,415.5 tons, with an average selling price of US\$105/kg and a production capacity of approximately 4,800 tons. The industry's gross profit margin was approximately 30%?40%. Cost structure: direct materials accounted for approximately 70%, manufacturing costs approximately 22%, and labor costs approximately 8%. Industry chain: upstream consists of epoxy resin, pigments and fillers (including zinc powder, etc.), curing agents, solvents, functional additives, and chemical raw materials; downstream consists of nuclear power plants/nuclear facilities.
