Abstracts

The global Nuclear Graphite market size is expected to reach \$ 528 million by 2032, rising at a market growth of 13.8% CAGR during the forecast period (2026-2032).

In 2025, global Nuclear Graphite production reached approximately 10,042 Tons, the average price is US\$ 17,544/Ton. Nuclear Graphite is high-purity artificial graphite materials specifically designed for use in nuclear reactor environments. Nuclear Graphite is used for neutron moderation, reflection, core structural support, and high-temperature radiation-resistant components. Nuclear Graphite is typically manufactured using carbon-based raw materials such as petroleum coke and needle coke through complex processes including isostatic pressing, calcination, impregnation, graphitization, and ultra-high purification. Nuclear Graphite require extremely low boron equivalent, excellent neutron performance, radiation resistance, high-temperature oxidation resistance, and long-term dimensional stability. Nuclear Graphite is widely used in high-temperature gas-cooled reactors (HTGR), very high-temperature reactors (VHTR), molten salt reactors (MSR), advanced small modular reactors (SMR), and some nuclear fusion systems, making it one of the key strategic materials in the advanced nuclear energy industry.

The global nuclear graphite industry is a high-barrier, technology-intensive advanced materials market, primarily used in high-temperature gas-cooled reactors (HTGRs), small modular reactors (SMRs), nuclear fusion, and fourth-generation nuclear power systems. Due to the need for ultra-high purity, low boron content, excellent neutron moderation properties, and long-term radiation stability, the global market is highly concentrated, with core manufacturers including FangDa Carbon, Mersen, SGL Carbon, Tokai Carbon, Ibiden, Morgan Advanced Materials, Toyo Tanso, Nippon Carbon, and Amsted Graphite Materials, among others.

Regionally, Japan is the core technology center for nuclear graphite globally. Toyo Tanso, Tokai Carbon, Ibiden, and Nippon Carbon have long dominated the high-end isostatic pressing nuclear graphite market, possessing significant technological advantages in high-purity graphite, isostatic pressing processes, and advanced reactor graphite. In Europe, companies like SGL Carbon and Mersen maintain a leading position in nuclear fusion, high-temperature structural graphite, and high-purity graphite refining. In recent years, the US market has seen significant strengthening of its domestic supply chain due to the development of SMR and advanced nuclear reactors. China, relying on companies like FangDa Carbon, is rapidly increasing its market share in fourth-generation nuclear power and domestically produced nuclear materials.

From an industry development perspective, the global nuclear graphite market is benefiting from the low-carbon energy transition, the commercialization of SMR, and the upgrading of advanced nuclear energy technologies. The industry as a whole is showing a development trend of 'high purification, long lifespan, precision machining, and integrated services.' At the same time, countries are strengthening the construction of their domestic nuclear graphite supply chains to enhance the security of strategic materials. In the future, the high-end market will still be dominated by a few leading international companies with long-term nuclear industry certification, materials research and development capabilities, and large-scale production systems, and industry concentration is expected to further increase.
