## Abstracts

The global Nuclear Inspection Service market size is expected to reach \$ 1484 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032).

Nuclear Inspection Service is a professional, independent third-party quality assurance activity designed to confirm whether products, materials, equipment, or systems meet specific technical specifications, contractual requirements, regulatory standards, or safety performance indicators through systematic inspection, testing, and verification. Its core function is to provide objective evidence, typically encompassing a full-process service from factory audits and production process monitoring to pre-shipment sampling and testing. This service is widely used in manufacturing, trade, energy, and infrastructure sectors, with the fundamental purpose of providing confidence to purchasers, regulatory agencies, and the public, reducing quality and compliance risks, preventing defective products from entering the market or projects, and thereby ensuring the reliability of the supply chain and the safety of end-use products.

The global development of nuclear inspection services exhibits a regional gradient, primarily driven by stringent regulations and advanced technologies. In developed markets such as North America, Europe, and Japan, services are highly mature, driven by stringent nuclear safety regulations, and widely utilize automated robots, advanced non-destructive testing, and digital monitoring technologies. Emerging nuclear power nations, represented by China and South Korea, have established complete independent regulatory and technological systems and are transitioning from simply importing and assimilating technologies to technological innovation and standards export. In contrast, emerging markets with planned or newly established nuclear power projects rely on technology exports from international suppliers and consulting firms,

and are currently in the capacity-building and standards-introduction phase. The global trend is towards risk-based intelligent in-service inspections, full-lifecycle data management, and collaborative development with more stringent international standards.

This report studies the global Nuclear Inspection Service demand, key companies, and key regions.
