Abstracts

The global Nuclear Material Transportation Service market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The market revenue growth is primarily driven by factors such as growing adoption of blockchain in nuclear material logistics, increasing number of nuclear power plants, and increasing demand for radioactive waste logistics.

In addition to the military, radioactive materials are used in manufacturing, research, and power generation. Shipping lines use specialized packaging, labeling and techniques when transporting radioactive items. Radioactive material requires special packaging, depending on the radioactive material being shipped. Each type of packaging undergoes specific tests to ensure it can withstand accidents, fire and water. The type of material contained in each shipment is marked by the shipper and, when necessary, signs are posted on the vehicle indicating the presence of radioactive material. The symbol also specifies the radioactivity level of the material.
