Abstracts

Moisture separator reheaters (MSR) are used between the high pressure turbine outlet and the inlet of low pressure turbine at a nuclear power plant. These devices are utilized to remove moisture from the steam and reheat it before it enters the low pressure turbines. Moisture Separator Reheaters play a significant role in increasing the thermodynamic efficiency of nuclear power facilities and also protect the low pressure turbine blades from corrosion.

Scope of the Report:

This report focuses on the Nuclear Moisture Separator Reheaters in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Horizontal MSR accounts for more than 75% of the market, and the market share has not changed a lot. Vertical MSR is much fewer than horizontal MSR. They are used in nuclear companies and more than 80% of the reactors are PWR.

According to our research, Alstom Power and GE Energy are the largest producers in the world. Since GE acquired energy business of Alstom in 2015, GE has become the top one manufacturer which occupied about one third of the market share in 2015. Other companies have much smaller market than GE with no more than 10% of the market.

The worldwide market for Nuclear Moisture Separator Reheaters is expected to grow at a CAGR of roughly 6.3% over the next five years, will reach 830 million US\$ in 2023, from 570 million US\$ in 2017, according to a new GIR (Global Info Research) study.
