Abstracts

The global Nuclear Power Plant Pressurizer market size is expected to reach \$ 749 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

The pressurizer in a pressurized water reactor (PWR) nuclear power plant is the core pressure control component of the primary coolant system. Its primary functions are to establish and maintain the primary system pressure within the normal operating range, accommodate coolant volume expansion caused by temperature fluctuations, and provide overpressure protection to prevent boiling in the main system. In 2025, global Nuclear Power Plant Pressurizer production reached approximately 52 units, with an average global market price of around 9000 K US\$/Unit. The production capacity of Nuclear Power Plant Pressurizer reaches 70 units, and the industry's gross profit margin is approximately between 20% and 40%.

Driven by the accelerating global transition to low-carbon energy and the continued growth of installed nuclear power capacity, the market for nuclear power plant pressurizers is experiencing steady development. Ongoing new construction projects for nuclear power units are fueling a rising demand for pressurizers?critical components of the primary coolant circuit within the nuclear island. Meanwhile, a large number of operating nuclear power units in Europe, the United States, Japan and other regions are entering the life extension operation and equipment upgrade stage, which is driving the continuous expansion of the pressurizer replacement and renovation market. In recent years, the accelerated commercialization of Small Modular Reactor (SMR) and advanced nuclear reactor technologies has created new market opportunities for nuclear pressurizers. Furthermore, continuous advancements in technologies?including nuclear-grade materials, large-scale forging, automated welding, intelligent inspection,

and digital design?have enhanced product safety, reliability, and manufacturing efficiency. As nations prioritize energy security, increase investment in nuclear power, and raise the localization rate of nuclear equipment, the market for nuclear power plant pressurizers will continue to evolve toward larger capacities, higher reliability, extended service life, intelligent manufacturing, and modular design.
