## Abstracts

The global Nuclear Power Support Services market size is expected to reach \$ 59486 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Nuclear power support services refer to the industry that provides comprehensive services throughout the entire lifecycle of a nuclear power plant, including professional technology, operation management, maintenance, overhaul, nuclear fuel supply, radiation protection, waste disposal, equipment upgrades, and consulting and training. It covers all ancillary services from the design, construction, and operation of a nuclear power plant to its decommissioning phase, aiming to improve the safety, efficiency, and economics of nuclear power plants while complying with national and international nuclear safety regulations and environmental standards. Nuclear power support services include not only on-site services but also remote monitoring, software management systems, and supply chain support for nuclear power equipment.

The prospects for the nuclear power support services industry are widely viewed favorably. On the one hand, global energy demand continues to grow, and the transition to low-carbon energy is accelerating, with nuclear power, as a stable and clean energy source, receiving policy and investment support. On the other hand, existing nuclear power plants face aging and the need for technological upgrades, continuously expanding the market space for nuclear power support services. Furthermore, with the development of small modular reactors (SMRs) and advanced nuclear technologies, the demand for related maintenance, inspection, and management services is expected to increase significantly. Globally, developing countries are actively building new nuclear power projects, while developed countries are focusing more on extending the lifespan and improving the efficiency of existing nuclear power plants, providing a long-term and

stable market for nuclear power support services.
