According to our (Global Info Research) latest study, the global Nuclear Steam Generator market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Steam generator is a device which is used to create steam by boiling water. Steam generators are also referred as heat exchangers used to convert water particles into steam from heat produced in a nuclear reactor plant. Nuclear steam generator is used in high pressure water reactor having primary loop (piping system that contains coolant) and secondary loops (have separate piping system, here water is converted to steam to rotate turbines which generate electricity) attached to the water reactor.

On the bases of dimensions, the global nuclear steam generator market can be divided into horizontal and vertical steam generator. Countries such as Canada, Japan, France and Germany use vertical form of nuclear steam generators to generate electricity from nuclear power plant, whereas Russian nuclear plants majorly use horizontal form of nuclear steam generator to generate electricity.
