Nuclear Transport and Logistics refers to the highly specialized system responsible for the safe, secure, and regulated movement of nuclear materials and radioactive substances across the nuclear fuel cycle, including uranium, nuclear fuel assemblies, radioactive isotopes, and spent nuclear waste. It encompasses packaging, handling, storage, transportation, monitoring, and end-to-end traceability under strict compliance with International Atomic Energy Agency (IAEA) standards and national nuclear regulatory frameworks. Due to the hazardous and strategic nature of nuclear materials, this logistics domain requires the use of certified shielding containers, armed security escorts, real-time tracking systems, and multi-layer authorization protocols, making it one of the most security-sensitive and tightly controlled logistics sectors globally.
