## Abstracts

According to our (Global Info Research) latest study, the global Nuclear Waste Recycling market size was valued at USD 3497.4 million in 2023 and is forecast to a readjusted size of USD 4113.4 million by 2030 with a CAGR of 2.3% during review period.

Nuclear waste is recyclable. Once reactor fuel (uranium or thorium) is used in a reactor, it can be treated and put into another reactor as fuel.

More than half of France's electricity comes from nuclear power and recycles used fuel. Other countries that use used fuels include the United Kingdom, Russia and Japan. The United States currently does not allow the recycling of nuclear waste because of the risk of nuclear proliferation. Countries that recycle or reprocess nuclear waste include Belgium, China and Switzerland.

The Global Info Research report includes an overview of the development of the Nuclear Waste Recycling industry chain, the market status of Energy Production (Direct Disposal Methods, Under Water Storage), Other (Direct Disposal Methods, Under Water Storage), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Nuclear Waste Recycling.
