The global Nuclear Wastewater Treatment Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Nuclear wastewater treatment equipment is a general term for devices or systems that can remove or reduce the radioactive contaminants from the wastewater generated by nuclear power plants, nuclear fuel processing plants, or other nuclear facilities. The treatment of nuclear wastewater is mainly aimed at radioactive metal elements, such as cesium and cobalt, which can be chemically reacted to remove radioactive particles. The treatment methods can be classified into traditional and non-traditional techniques. Traditional techniques include chemical precipitation, electrolysis, sulfide precipitation, evaporation, and ion exchange. Non-traditional techniques include electrochemical ion exchange, electrochemical reduction, membrane separation, adsorption, and biological treatment.
