A Nucleic Acid Shearing Device is a specialized instrument used in molecular biology and genomics research. This device is designed to fragment nucleic acids, such as DNA (deoxyribonucleic acid) and RNA (ribonucleic acid), into smaller pieces. The shearing process is crucial for a variety of downstream applications. For example, in next - generation sequencing (NGS), DNA needs to be fragmented into a suitable size range (usually a few hundred base pairs) to ensure efficient library construction and accurate sequencing results.
