The global Nucleophilic Organolithium Reagent market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

In organometallic chemistry, nucleophilic organolithium reagents are chemical compounds that contain carbon–lithium (C–Li) bonds. These reagents are important in organic synthesis, and are frequently used to transfer the organic group or the lithium atom to the substrates in synthetic steps, through nucleophilic addition or simple deprotonation. Nucleophilic organolithium reagents are used in industry as an initiator for anionic polymerization, which leads to the production of various elastomers. They have also been applied in asymmetric synthesis in the pharmaceutical industry.
