According to our (Global Info Research) latest study, the global Numerical Relay Tester market size was valued at US\$ 92.78 million in 2025 and is forecast to a readjusted size of US\$ 115 million by 2032 with a CAGR of 3.2% during review period.

In 2025, the global production of digital relay protection testers reached 16,010 units, with an average selling price of US\$5,200 per unit. The global annual production capacity of digital relay protection testers is approximately 30,000 units, with a gross profit margin of approximately 31.5%. A digital relay protection tester is a specialized testing device used for comprehensive diagnosis and verification of the function, performance, and reliability of relay protection devices in power systems. It digitizes and intelligently transforms traditional relay protection substation testing tools, possessing high precision, flexibility, and automation characteristics, and is widely used in field testing, laboratory testing, and operation and maintenance of power systems. Upstream raw materials for digital relay protection testers include semiconductor components and electronic components, optical communication-related materials, optical modules, optical transceiver chips, etc. The midstream consists of digital relay protection tester manufacturers, and the downstream mainly includes the electrical, railway, and petrochemical industries.
