Nursing triage service refers to a professional medical service where registered nurses with professional qualifications assess and classify patients' chief symptoms, vital signs, and the urgency of their condition according to standardized hierarchical medical procedures, and determine the priority of treatment or referral path. This service is widely used in hospital emergency departments, outpatient halls, community health institutions, and telemedicine platforms, and is a crucial link in improving the efficiency of medical resource allocation and ensuring priority treatment for critically ill patients. Nursing triage typically relies on a hierarchical standard system and clinical decision support tools, completing an initial assessment through face-to-face consultations, telephone, or online platforms, and directing patients to the appropriate department or treatment process. Its core value lies in shortening waiting times, optimizing medical processes, reducing the risk of misdiagnosis, and improving patient satisfaction; it is a key service module in the construction of modern hierarchical medical systems and smart healthcare.
