The global Nursing Pads market size is expected to reach \$ 168 million by 2032, rising at a market growth of 6.9% CAGR during the forecast period (2026-2032).

Nursing Pads (also known Breast Pads) are absorbent pads which are used to prevent breastmilk leakages from seeping through bras and other garments. Not every new mother needs them, but they can be very useful, and it is advisable to purchase a package of them in preparation for the days following childbirth.

Nursing Pads are highly absorbent, and are usually designed to wick any breastmilk which leaks out into the center of the pad, keeping it away from the nipple without staining the bra or outer garments. The pads can be worn inside a nursing bra, or attached with adhesive tape.

Americas is the largest Nursing Pads market with about 37% market share. Asia is follower, accounting for about 29% market share.
