According to our (Global Info Research) latest study, the global Nutrient Liposome Microcapsule Powder market size was valued at US\$ 483 million in 2025 and is forecast to a readjusted size of US\$ 710 million by 2032 with a CAGR of 5.9% during review period.

In 2025, global nutrient liposome microcapsule powder production reached 18.8 thousand tons, with an average selling price of USD 25 per kg, production capacity of 24 thousand tons, and gross margin of 35%.

Nutrient liposome microcapsule powder refers to a nutritional delivery product in which active ingredients such as vitamins, minerals, plant extracts, antioxidants, and fatty acids are encapsulated within liposome structures and then processed into powder form through spray drying or freeze drying. Liposomes consist of phospholipid bilayers that can encapsulate both water-soluble and fat-soluble nutrients, improving stability, bioavailability, and controlled release performance. The product is widely used in dietary supplements, functional foods, infant nutrition, and medical nutrition applications.

Upstream mainly includes phospholipid raw materials (such as soybean lecithin and sunflower lecithin), nutritional active ingredients (vitamins, minerals, plant extracts, Omega-3 fatty acids, coenzyme Q10), wall materials (maltodextrin, gum arabic, modified starch), and spray drying or freeze drying equipment. Midstream consists of liposome preparation and microencapsulation manufacturers, with core technologies including liposome formulation technology, particle size control, and encapsulation efficiency control. Downstream applications mainly include dietary supplements, functional foods and beverages, infant formula, medical nutrition, and health products.
