## Abstracts

According to our (Global Info Research) latest study, the global NVMe Cache Accelerator Card market size was valued at US\$ 2804 million in 2025 and is forecast to a readjusted size of US\$ 13435 million by 2032 with a CAGR of 25.0% during review period.

NVMe Cache Accelerator Card is a hardware device that uses high-speed NVMe (Non-Volatile Memory Express) storage as a caching layer to accelerate data access for servers, storage arrays, or data-intensive applications. By temporarily storing frequently accessed data in NVMe memory, it reduces latency and improves overall system performance compared to relying solely on traditional storage drives. In 2025, global standalone NVMe cache/accelerator card production reached approximately 2.27 M units, with an average global market price of around US\$ 1,200 per unit. Annual production capacity is 2.55 M units. Gross Profit Margin: 30%. The NVMe cache/accelerator card industry chain is structured with clear upstream, midstream, and downstream segments. Upstream primarily includes NAND and DRAM suppliers, PCIe controller manufacturers, and PCB/connector producers. Midstream consists of NVMe card manufacturers, system integrators, and server/storage platform vendors. Downstream covers hyperscale cloud operators, enterprise data centers, HPC/AI computing platforms, and edge computing solutions. The upstream supply of memory and controllers directly influences cost, performance, and innovation of NVMe accelerator cards, while downstream demand drives product adoption and technological evolution. NVMe cache/accelerator cards represent a pivotal component in modern data infrastructure, bridging the gap between storage speed and system performance. As AI, cloud computing, and data-intensive applications continue to grow, the demand for high-performance, low-latency storage acceleration will only increase. Investing in scalable,

modular NVMe solutions today can future-proof enterprise infrastructure and enable competitive advantages through faster data processing, reduced latency, and improved overall system efficiency.
