Abstracts

The global Nylon 12 market size is expected to reach \$ 1977 million by 2032, rising at a market growth of 2.6% CAGR during the forecast period (2026-2032).

Polyamide 12 (PA 12, Nylon 12) is a polymer with the formula $[(CH_2)_{11}C(O)NH]_n$. It is made from ω -aminolauric acid or laurolactam monomers that each have 12 carbons. It is Semi-crystalline-crystalline thermoplastic material. Relatively low density, low water absorption. Polyamide 12 has a broad range of applications as polyamide additives.

Europe is the largest Nylon 12 market with about 72% market share. North America is follower, accounting for about 18% market share. The key players are Evonik(DE), Arkema(FR), EMS-Grivory(CH), UBE Industries(JP) etc. Top 3 companies occupied about 87% market share.

In the Chinese market, nylon 12 is one of the few key materials in the field of new chemical materials in China that all rely on imports, and the competitiveness of domestic nylon 12 products in the market is low. However, with the production of Yantai Wanhua production line, the domestic nylon 12 industry is expected to break the foreign monopoly pattern, and the decline in the average price of the product market is expected to become an important force to promote the growth of domestic product demand.

Nylon 12 has most of the general properties of general nylon, while low water absorption, high dimensional stability, high temperature resistance, corrosion resistance, good toughness, easy processing, in plastic alloys, automotive manufacturing, aircraft manufacturing, additive manufacturing (3D printing), electronic and electrical products, mechanical appliances, medical technology, oil and gas industry

and other fields have a wide range of applications. In recent years, the size of the global specialty nylon market has shown an increasing trend year by year, and in the entire specialty nylon market, the largest product in the market is nylon 12.

Automotive lightweight: With the improvement of automotive lightweight requirements, nylon 12, as an excellent automotive lightweight material, is widely used in automotive fluid transmission pipelines, mainly including fuel pipelines, clutch pipelines, vacuum brake supercharger pipelines, air brake pipelines, battery coolant pipelines, etc. In the future, the production and sales of Chinese automobiles and new energy vehicles will gradually recover, which will further expand the market demand for nylon 12.

3D printing industry is developing rapidly: nylon 12 with its high fluidity, low static electricity, low water absorption, moderate melting point and high dimensional accuracy of products and other excellent properties, gradually become the ideal material for engineering plastic 3D printing. The increase in the size of China's 3D printing market has also expanded the market demand for nylon 12 to a certain extent.

This report studies the global Nylon 12 production, demand, key manufacturers, and key regions.
