Abstracts

According to our (Global Info Research) latest study, the global Nylon 66 Salt (AH Salt) market size was valued at US\$ 7540 million in 2025 and is forecast to a readjusted size of US\$ 9334 million by 2032 with a CAGR of 3.1% during review period.

In 2025, global Nylon 66 Salt production reached approximately 3.44 million tons, with an average global market price of around US\$2,128 per ton. Nylon 66 Salt, also known as adipic acid, compound with hexane-1,6-diamine (1:1), commonly known as AH salt, and is mainly used in industrial-grade production. AH salt is an intermediate used in producing Nylon Intermediate.

The global Nylon 66 Salt market is in a phase of steady development, characterized by integrated industrial chains and a competitive landscape divided among key regions. Production is heavily concentrated among companies with proprietary access to the critical raw material, adiponitrile, establishing a tripartite production map dominated by North America, Europe, and China . Industry leaders like INVISTA, BASF, Ascend, and Shenma Industry consolidate their positions through vertical integration, with Shenma having built a complete chain from base materials to downstream products . Concurrently, China is accelerating the localization of production to meet domestic demand, exemplified by companies like Anshan Guorui Chemical adopting advanced foreign technologies.

The development trend points decisively toward upstream security and downstream high-end applications. Significant investment is being directed toward domestic adiponitrile facilities to ensure supply chain stability . Furthermore, application fields are diversifying beyond traditional industrial yarn and engineering plastics into high-growth

sectors like new energy vehicles, electronics, and specialty fibers .

Key growth opportunities arise from global automotive lightweighting, the renewable energy sector, and the demand for differentiated textile materials, alongside industrialization in emerging markets . However, the market's expansion is tempered by significant barriers, including the technological complexity and supply risks of upstream adiponitrile, susceptibility to macroeconomic fluctuations, and the pressure on corporate margins from volatile raw material costs.
