Abstracts

The global Nylon 66 Tire Cord Fabrics market size is expected to reach \$ 2195 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

In 2025, global Nylon 66 Tire Cord Fabrics production reached approximately 310,000 tons with average price of 4,800 USD per ton.

Nylon 66 Tire Cord Fabric is an industrial skeleton fabric made from high-tenacity polyhexamethylene adipamide filaments through twisting and weaving. The warp yarns are arranged closely like a curtain, while the weft yarns are sparse to fix the structure. After RFL dipping and heat setting, the fabric can bond firmly with rubber, featuring high strength, good heat resistance, fatigue resistance, impact resistance and dimensional stability. As a core reinforcing material inside tires, it mainly undertakes load support, stress transfer and structural stability, which directly affect the service life, safety performance and load capacity of tires. This product is mostly used in heavy-duty tires, OTR tires, aircraft tires and high-end bias tires, acting as an irreplaceable key material in high-performance tire manufacturing.

The industrial chain of Nylon 66 Tire Cord Fabric is based on petrochemical industry in the upstream. The core raw materials include adiponitrile, hexamethylenediamine and adipic acid, which are polymerized into Nylon 66 chips and then made into high-tenacity industrial filaments through spinning and twisting. This sector has high technical barriers, and raw material supply has a significant impact on the cost and stability of the whole industry. The midstream includes weaving and dipping processing, turning industrial filaments into grey fabrics, and then producing finished cord fabrics meeting tire standards through precise processes such as dipping, stretching and heat setting.

The process control level directly determines product quality. The downstream is closely connected with the tire manufacturing industry, which requires strict certification to enter the supporting system. The terminal applications cover commercial vehicles, construction machinery, agricultural equipment, aviation and special vehicles. Some leading enterprises extend upstream to raw materials and downstream to non-tire applications, forming a full industrial chain layout.

The global Nylon 66 Tire Cord Fabric market maintains a steady development trend with sufficient long-term growth momentum. With the increase of global commercial vehicle ownership, continuous advancement of infrastructure construction and improvement of agricultural mechanization, the demand for tire market remains stable, providing a solid foundation for Nylon 66 Tire Cord Fabric. The rapid development of the new energy vehicle industry puts forward higher requirements for lightweight, high strength, low rolling resistance and dimensional stability of tires, further driving the demand for high-end Nylon 66 Tire Cord Fabric. Continuous breakthroughs in raw material technology and a more stable and complete supply chain promote the improvement of overall industrial competitiveness. Products continue to upgrade towards high strength, low shrinkage, heat and aging resistance and environmental protection, adapting to more high-end tires and special working conditions. The international market shows differentiated development. Mature markets are dominated by product upgrading and technological iteration, while emerging markets have more obvious demand growth with the popularization of automobile industry and accelerated infrastructure investment. In addition to the tire field, non-tire applications such as conveyor belts, transmission belts and safety structural components are continuously expanding, bringing new growth space for the industry. In the future, the industry will develop towards high performance, green, intelligent and intensive development. With advantages in technology, cost and customer resources, leading enterprises will continue to optimize the global layout, and the industry as a whole will move forward steadily towards high-quality and sustainable development.
