## Abstracts

The global Nylon Air Covered Yarn market size is expected to reach \$ 928 million by 2032, rising at a market growth of 3.3% CAGR during the forecast period (2026-2032).

In 2025, global Nylon Air Covered Yarn production reached approximately 330 k tons with an average global market price of around US\$ 2,200 per ton, and a gross profit margin of approximately 20%-40%. Nylon Air Covered Yarn is a composite yarn made by using compressed air to entangle nylon filaments around a core yarn or to interlace multiple filaments into a cohesive structure. The air-covering process creates a uniform, elastic, and soft yarn surface with good bulk, abrasion resistance, and stable appearance. Compared with conventional mechanical covering, air covering can improve productivity and deliver better handfeel and fabric uniformity. The yarn is widely used in hosiery, seamless garments, sportswear, underwear, elastic fabrics, and functional textiles where comfort, stretch recovery, and durability are required. The industrial chain of Nylon Air Covered Yarn includes upstream nylon polymer and filaments, core yarn options, spin finishes, lubricants, dyes or masterbatches, and packaging materials. Midstream processes focus on air covering and interlacing using air-jet nozzles, tension control, winding, yarn waxing, inspection, and quality control of evenness, hairiness, and elasticity. Downstream applications include knitting and weaving mills producing hosiery, seamless apparel, sports and outdoor fabrics, medical compression textiles, and various elastic consumer products. Supporting links include dyeing/finishing, fabric testing, certification, inventory management, and logistics services to ensure consistent supply and performance.
