Abstracts

The global Nylon Dope Dyed Yarn market size is expected to reach \$ 2438 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

In 2025, global Nylon Dope Dyed Yarn production reached approximately 650 k tons with an average global market price of around US\$ 2,650 per ton, and a gross profit margin of approximately 20%-40%. Nylon Dope Dyed Yarn is nylon filament or staple yarn colored during spinning by dispersing pigments into the polymer melt or dope, so color becomes part of the fiber rather than applied by later dyeing. This method delivers excellent shade consistency, strong wash and light fastness, and reduced color variation between lots. It also reduces water use, wastewater discharge, and dyeing energy versus piece-dye processes. The yarn is used where stable, repeatable color and durability are critical, including carpets, sportswear, outdoor textiles, and automotive interiors. The industrial chain of Nylon Dope Dyed Yarn includes upstream nylon polymer inputs, pigments and masterbatches, stabilizers, additives, spin finishes, and packaging materials. Midstream processes cover polymer melt preparation, pigment dispersion, melt spinning, quenching, drawing, texturing, winding, quality inspection, and color control. Downstream applications include carpet and floor coverings, apparel and athleisure, swimwear and lingerie, outdoor fabrics, luggage and bags, automotive interior textiles, and industrial fabrics. Supporting links include color matching, lab testing, certification, inventory management, and recycling solutions for end-of-life textile materials.
