## Abstracts

The global Nylon Tire Cord Fabric market size is expected to reach \$ 4063 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

In 2025, global Nylon Tire Cord Fabric production reached approximately 713,000 tons with average price of 3,787 USD per ton.

Nylon tire cord fabric is a key skeletal reinforcing material for tires, made of polyamide nylon fibers through twisting, weaving, rubber dipping and heat setting processes. It features excellent mechanical toughness, impact resistance, repeated bending fatigue resistance and low-temperature adaptability. The material can effectively buffer alternating loads and road impacts during vehicle operation, stabilize tire structure, and reduce deformation, tearing and aging loss. Professional dipping treatment strengthens the bonding force between fibers and rubber, enabling adaptation to complex road conditions, heavy-load operation and harsh working environments. Compared with other chemical fiber materials, it has superior elasticity and tear resistance with unique comprehensive advantages. Widely used in bias tires, construction machinery tires, agricultural tires, two-wheeler tires and various special heavy-duty tires, it is an indispensable functional reinforcement material, ensuring tire load-bearing performance and driving durability.

Widely used in bias tires, construction machinery tires, agricultural tires, two-wheeler tires and various special heavy-duty tires, it is an indispensable functional reinforcement material, ensuring tire load-bearing performance and driving durability.

The nylon tire cord fabric industry has rigid market demand and stable overall operation with strong long-term development resilience. Despite the continuous penetration of radial tires and the widespread application of polyester cord fabrics, nylon materials remain irreplaceable in bias tires, engineering tires and agricultural tires due to outstanding impact resistance, high elasticity and heavy-load adaptability, forming a benign complementary pattern with polyester products. Stable demands from infrastructure construction, agricultural production, short-distance freight and two-wheeled transportation continuously support the original and replacement tire market. Downstream industrial upgrading drives the iteration of modified high-performance nylon cord fabrics, boosting demand for weather-resistant, wear-resistant and long-life products. Under low-carbon policies, the industry phases out backward capacity, promotes energy-saving production and eco-friendly dipping processes, and accelerates green transformation. Industrial concentration rises steadily. Leading enterprises expand influence through technological research and supporting advantages. With continuous optimization of segmented tracks, the industry will maintain a stable and healthy development trend in the medium and long term.
