## Abstracts

According to our (Global Info Research) latest study, the global  $\beta$ -Aminopropionitrile market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

$\beta$ -aminopropionitrile acts as an irreversible inhibitor of lysyl oxidase (LOX), an enzyme involved in collagen cross-linking. In mammals, metabolism of 3-aminopropionitrile results in the release of cyanide ions. Metabolic activity is concentrated in the liver microsomal fraction and is thought to proceed via a free radical pathway.

3-Aminopropionitrile is an important organic chemical raw material, widely used in medicine, pesticides, dyes, coatings and other fields. With the development of these fields, the demand for 3-aminopropionitrile may continue to increase, providing a broad market space for its development. With the continuous advancement of science and technology, breakthroughs may be achieved in the production technology and application fields of 3-aminopropionitrile. For example, by developing new production processes to increase the yield and purity of 3-aminopropionitrile and reduce production costs, it will help improve its market competitiveness.

This report is a detailed and comprehensive analysis for global  $\beta$ -Aminopropionitrile market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is constantly changing, this
