## Abstracts

The global O-Chloroaniline market size is expected to reach \$ 230 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032). O-Chloroaniline is a toxic organic compound, appearing as a colorless to amber liquid at room temperature. It is primarily used as a key intermediate in the production of fine chemicals such as dyes, pharmaceuticals, and pesticides.

Upstream raw materials mainly include basic chemical raw materials such as benzene and chlorine, as well as the key intermediate 2-nitrochlorobenzene. Currently, the mainstream production technology has upgraded from the highly polluting iron powder reduction method to the more environmentally friendly catalytic hydrogenation reduction method.

Global sales are projected to reach approximately 84,600 tons in 2025, with an average market price of approximately US\$2015 per ton. The industry's gross profit margin ranges from 3% to 15%.

With increasing scrutiny of chemical compliance across global supply chains, the industry consensus is shifting towards phasing out highly polluting iron powder reduction processes and fully adopting continuous flow catalytic hydrogenation technology. The driving force behind this trend primarily stems from the upgrading of downstream pesticide varieties and the color enhancement of global textile dyes. In the agricultural sector, with the growing demand for broad-spectrum, low-toxicity herbicides (such as quizalofop) and insecticides, the position of o-chloroaniline as a key intermediate is becoming increasingly secure.

Meanwhile, the global organic pigment industry is transforming towards higher weather resistance and higher color intensity, which has directly driven the increased demand for high-quality o-chloroaniline. Furthermore, the penetration of research and development of chlorinated aromatic amine intermediates in the pharmaceutical industry

has opened up high-margin niche application areas for this sector.

This report studies the global O-Chloroaniline production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for O-Chloroaniline and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of O-Chloroaniline that contribute to its increasing demand across many markets.
