According to our (Global Info Research) latest study, the global Ocean Bound Plastics market size was valued at US$ 407 million in 2025 and is forecast to a readjusted size of US$ 789 million by 2032 with a CAGR of 10.0% during review period.

As the name suggests, ocean-bound plastic is plastic that could potentially end up in our oceans — this generates roughly 80% of plastic marine litter, according to the Ocean Bound Plastic Certification. This report focus on Recycled Ocean Bound Plastic.

Around 500 million tons of plastic waste is produced every year, according to Our World in Data — and mismanagement is one of the main reasons this overwhelming amount of plastic pollutes our oceans. Although a very straightforward term, ocean-bound plastic stretches beyond littering on beaches. In fact, it's often a result of mainland plastic consumption. While many might believe we can just recycle more to solve the problem, the reality is that a large percentage of marine litter actually comes from non-commercially recyclable plastic materials. Greenpeace paints a clear picture of this, reporting that only 5%–6% of plastics were actually recycled in 2022.

This report is a detailed and comprehensive analysis for global Ocean Bound Plastics market. Both quantitative and qualitative analyses are presented by company, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets.
