Abstracts

The global Ocean Recycled Yarn market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ocean Recycled Yarn is a type of yarn that is made by transforming plastic waste that is collected from the ocean into a usable fiber. This innovative process helps to remove harmful plastic debris from the ocean and reduce pollution. The plastic waste, such as bottles or fishing nets, is cleaned, shredded, and then spun into yarn, which can be used to create various textile products like clothing, accessories, or home furnishings. Ocean Recycled Yarn offers a sustainable alternative to traditional yarns, as it helps to combat plastic pollution and promotes a more environmentally friendly approach to textile production.
