Octenylsuccinic Anhydride (OSA) is an organic compound used as a food additive to modify the properties of starch, such as its solubility, emulsification, and stability. The OSA market refers to the market for this food additive.

OSA is used in a wide range of food products, including sauces, dressings, bakery products, confectionery, and beverages. It is used to enhance the texture, flavor, and appearance of these products while also improving their shelf life and stability.

The OSA market is driven by the increasing demand for convenience food and the growing trend towards natural and clean label ingredients. OSA is considered safe for human consumption by regulatory bodies such as the US FDA and the European Union. However, there have been concerns raised about the potential health risks associated with the consumption of modified starches in large quantities.
