According to our (Global Info Research) latest study, the global Odour Control System market size was valued at USD 574.2 million in 2023 and is forecast to a readjusted size of USD 870.5 million by 2030 with a CAGR of 6.1% during review period.

Odour control systems are installed based on the effluent type and the odour intensity. The plants may even require multi-layer or multiple odour control systems. In the municipal sector, there is a trend of resource recovery wherein wastewater treatment units use, recover, or sell organic solids, nutrients, minerals, or energy. The facilities are sometimes called water resource recovery facilities as opposed to wastewater treatment plants. Potential areas for water recovery resource facilities are anaerobic digestion and nutrient recovery with a combination of heat and power.

The development of Odor Control System may benefit from the continuous advancement of technology, such as improvements in sensor technology and improvements in odor simulation technology. Future Odour Control Systems may have higher sensitivity and accuracy, allowing them to better simulate and detect various odors.
