Developing practical and efficient automobile exhaust purification catalysts is one of the best measures to control automobile exhaust emissions. As the core of automobile exhaust purifier, catalysts are mainly composed of active components, carriers, additives and coatings. Among them, platinum group noble metals palladium (Pd), platinum (Pt) and rhodium (Rh) are the most commonly used active components in the three-way catalysts for automobile exhaust purification at present. Their role is to remove CO, HC NOx and other harmful gases are converted into CO₂, H₂O, N₂, etc. through oxidation and reduction to reduce pollution.
