Abstracts

The off-grid power systems for remote sensing have extensive applications across various end-user industries such as oil and gas and wind energy. These systems are employed when the grid lines are unavailable, to reduce the load on the primary network, unreliable power, or in situations when 100% standalone power is needed. Off-grid power systems are being increasingly used by various monitoring systems, including Supervisory Control and Data Acquisition (SCADA) systems, Light Detection and Ranging (LiDAR) systems, and other numerous other remote monitoring devices.

Scope of the Report:

This report focuses on the Off-grid Remote Sensing Power System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The ability of remote sensing technology to provide world-class applications will result in its adoption by several end-user industries, such as oil and gas, aviation, and wind power industries. In addition to accuracy, LIDAR technology has several advantages over the MET systems such as low maintenance and higher uptime. As a result, the coming years will witness the replacement of the existing MET masts by LIDAR for wind measurements and they will soon find applications in several future offshore wind projects as well.

The worldwide market for Off-grid Remote Sensing Power System is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023,

from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
