Abstracts

Off-grid solar power systems allow you to store your solar power in batteries for use when the power grid goes down or if you are not on the grid. Hybrid systems provide power to offset the grid power whenever the sun is shining and will even send excess power to the grid for credit for later use.

Scope of the Report:

This report focuses on the Off-grid Solar Power Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Owing to various expensive factors, the cost of the main grid extension for rural electrification is quite high. Grid extension is affordable and offers a lower cost per kW while covering a highly dense area. Regions lacking grid access are sparsely populated and as a result, grid extension becomes an expensive option.

Because of the high cost of grid extension, several governments and communities are implementing stand-alone energy systems to provide decentralized power to remote households and communities since these off-grid systems are highly cost-effective and can be scaled according to the various power needs.

The worldwide market for Off-grid Solar Power Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
