Abstracts

The global Off High-Way Mining Truck market size is expected to reach \$ 8304 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

In 2025, global sales of off-highway mining trucks reached 12,500 units, with an average selling price of US\$450,000 per unit and a total production capacity of approximately 15,000 units per year. Gross profit margins ranged from 14% to 18%. Off-highway mining trucks are a type of engineering vehicle specifically designed for use in mines, quarries, heavy construction, and open-pit mining environments. They include mining dump trucks, mining loaders, mining excavators, and transport vehicles, characterized by high load-bearing capacity, high wear resistance, and strong off-road capabilities. Upstream raw materials mainly include high-strength steel, engine and hydraulic system components, tires, and chassis components. Downstream suppliers primarily include mining companies, infrastructure construction enterprises, and large quarries.

The supply model is mostly based on vehicle sales and long-term maintenance contracts. Market demand continues to grow, driven by mineral extraction, infrastructure investment, and the development of the energy industry. Significant business opportunities exist, particularly in intelligent, energy-saving, environmentally friendly, and autonomous driving mining trucks. Future development can achieve differentiated competition and value-added growth through electrification, integration of autonomous driving technology, and the application of durable materials.
